Dual Chime

An electronic clock movement that can be set to select one of two chimes. These are most commonly Westminster/Whittington.

Light Sensor

A device that automatically disengages all alarms and melodies when there is no available light. Light sensors are available in some mantel clocks and wall clocks with chimes or musical movements.

Luminous Hands and Markers

Markers on dials or hands glow in the dark for a period of time.

Nighttime Chime Silencer

A mechanism featured in a chime clock that automatically shuts off the chime at 11:00 PM and resumes functioning at 6:00 AM.

Quiet Sweep Second Hand

The second hand moves in one continuous motion and has the advantage of being extremely quiet while operating.

Regulator

The pendulum of a clock, which originally served the function of "regulating" a mechanical time keeping mechanism, is now a popular ornamental feature.

Snooze Alarm

This alarm, once stopped, allows for three to five minutes additional sleep before the alarm resumes sounding.

Step Second Hand

Unique to quartz clocks, this "start-stop-start" motion precisely measures time in one second intervals.

Swarovski Crystal

Indicates genuine Swarovski Crystal components.
